

YouTube video Analysis: How to Create Viral Epoxy Floor Transformation Videos with AI

Transcript:

This brand-new channel just passed half a billion views in less than three months: The niche? Epoxy floor makeovers — those strangely satisfying videos where old, cracked, boring floors are transformed into smooth, glossy finishes. One of their videos has 249 million views. And it's not just one viral hit — every video they upload pulls in millions. At first, I thought maybe this was only working on YouTube. But no. I checked TikTok — same niche, same massive growth. One account has over 3 million followers, and single videos are getting 58 million, 72 million, even 81 million views. Then I looked at Instagram. Even crazier. Videos in this space are reaching 270 million views... 341 million views... on single posts. This isn't just a trend. It's a wave building across every platform at the same time. If you want to learn exactly how to tap into this, make sure you hit subscribe — because what I'm about to show you will seriously shift your entire channel strategy. In this video, I'm walking you through the full process. Step by step. How to create these epoxy floor videos that look smooth, polished, and realistic. Plus, I'll give you the exact prompt I use — and show you how I structure it to get consistent results every single time. Don't just take my word for it. I tested this myself. Here's a video I made using the exact method I'm about to teach you — same style, same system, same process. Alright — let's dive in before everyone else catches on. Find Viral Video Ideas Before you make any visuals, you need strong instructions. If your prompt is weak, the AI gives you messy, unrealistic results. To save you time, I made one master prompt that does everything—first it gives you trending video ideas, then it builds the exact image and video prompts you'll use. This prompt is pinned in the description of this video. You can also get this prompt and other prompts from my previous videos inside my Telegram channel (
